Art Unit: 3621

**DETAILED ACTION**  
**RESPONSE TO AMENDMENT**

1. This Office action is in response to Applicant's amendment, filed on 08/25/2003.
2. Claims 1-9 are remained and claims 10-13 are added.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-13 are rejected under 35 U.S.C. 102 (b) as being anticipated by Abelow (U.S. pat. No. 5,999,908).

As per claims 1-13, Abelow discloses a product or service that contains a microprocessor and a facility for communication, comprising:

multiple actuators, each of the multiple actuators having an actuator controller that is responsive to price information to control an applied force by the actuator on the structure (see., col 2, lines 13-27, specifically wherein it is stated that multiple actuators or computer hardware, software and communications technologies to construct a module that is built into certain products and services,

---

to establish a network);

**Art Unit: 3621**

an electrical conductor for transmitting voltage and accumulating charge, referred to as a marketwire; the marketwire being connected to each actuator controller to convey price information to the actuator controllers by analog variations in electrical characteristics of the marketwire (see., col 76, lines 61-65, specialized feedback systems may also provides price information, col 70, lines 60-11, col 1, lines 56-67, col 2, lines 1-5, productivity measures is readable as a sensor).

#### **REMARKS**

5. In response to claims 1-13, Applicant argues that the prior art of record taken alone or in combination does not teach or suggest:

a. “a control assembly for controlling structures, wherein the structure is a physical in nature, e.g a robotic arm or a beam”. However, the Examiner respectfully disagrees because the claims (1, 4 and 7) do not recite “a robotic arm or a beam”, and therefore, the structure can be interpreted as any structure.

b. “Multiple actuators”. As indicated above, multiple actuators is interpreted as a combination of computer hardware, software and communications technologies to construct a module that is built into certain products and services, to establish a network of customer-vendor-distributor interactions and communications.
